

Story Design Template

Phase: Report / Story Design

Project Name: Food Consumer Behaviour Analysis

Team ID: PNT2022TMID01234

Date: 24 September 2024 / 15 October 2024

Maximum Marks: 5 Marks

Story Design Overview

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for data storytelling, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, Story is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Executive Story Narrative Progression

- **Story Point 1: Macro Consumer Demographics & Dining Cohorts** — Introduces the overall population breakdown. Establishes that Millennials (25-34) and Gen Z (18-24) represent 68% of dining transaction volume and drive digital channel adoption.
- **Story Point 2: The Digital Ordering Paradigm Shift** — Illustrates how mobile delivery applications captured 54.2% market share over traditional dine-in. Highlights the surge in weeknight solo meal delivery.
- **Story Point 3: Spend Elasticity & Cuisine Economics** — Unveils that while Fast Food drives sheer volume, Healthy/Organic and Artisan Italian cuisines achieve 2.4x higher basket sizes among high-income cohorts.
- **Story Point 4: Service Speed as the Primary Loyalty Determinant** — Demonstrates the direct mathematical correlation between delivery transit duration and customer retention. Shows that 30-min delivery threshold is critical for 5-star ratings.
- **Story Point 5: Strategic Business Roadmap & Operational Recommendations** — Presents prescriptive strategies: implement dynamic surge pricing transparency, bundle family meals for multi-member homes, and optimize dark kitchen locations near millennial urban clusters.

Key Observations

- **Digital Delivery Channel Dominates Volume:** Food delivery apps capture the largest share of total orders, accounting for 54.2% of transactions (\$1.25M in sales).
- **Seasonal Holiday Surge:** Food spending peaks dramatically in November and December, while February records the lowest seasonal volume, indicating strong holiday event sensitivity.
- **Millennial Demographic Leads Expenditure:** The 25-34 age demographic contributes 48.6% of overall platform spend and shows the highest frequency of weekly orders (4.2 orders/week).
- **Delivery Speed Strongly Dictates Retention:** Transit times under 30 minutes maintain a 4.7/5.0 customer satisfaction score, while delays beyond 45 minutes reduce repeat purchase intent by over 60%.
